MARCH MADNESS...

By Adam Zyglis, The Buffalo News (2013)

### Talking points

1. What kind of "March Madness" is Adam Zyglis showing in his cartoon?
2. In a cartoon from March 2012, what is Zyglis saying about last year's weather?
3. How have temperatures changed where you live between March 2012 and March 2013?
4. What is the jet stream and how does it affect our weather?
5. What can change the path of the jet stream?

### Between the lines

"With more solar energy going into the Arctic Ocean because of lost ice, there is reason to expect more extreme weather events, such as heavy snowfall, heat waves, and flooding in North America and Europe." - NOAA report.
