

Cartoons for the Classroom

Presented by NIEonline.com and the Association of American Editorial Cartoonists (AAEC)

Have anti-vax claims become silly?

THE NEW URINE TEST

David Cohen, Asheville Citizen-Times / Courtesy of AAEC

Talking Points

1. What are these cartoonists saying about an anti-vaccination activist urging people to drink their urine to ward off COVID-19?
2. Why do people reject medically tested and FDA approved COVID-19 vaccines and turn to untested and possibly dangerous remedies touted on the Internet?
3. A top tech executive in Utah had to quit last week after he claimed the vaccines are part of an evil conspiracy to kill "billions of people" in an attempt to establish "totalitarian rule" of the world. What theories or stories about COVID-19 vaccinations have you read or heard?
4. Do you trust the advice of doctors, scientists and public health experts? Why or why not?

Between the lines

"I'm a kidney doctor. I've studied how the kidneys make urine for 39 years. Do not, I repeat do not, drink urine to treat COVID. That is all." - Dr. Jon Klein, University of Louisville
